Getting Stronger: A Guidebook to the Tennessee Economy, 2016

Executive Summary

The Tennessee economy strengthened in 2016. Nonagricultural employment increased from 2,893,900 to 2,965,800; the number of employers increased, the state labor force grew, and state unemployment rates declined. Per capita incomes increased slightly as average wages rose and poverty rates declined somewhat. The short-term job outlook is for annual average employment growth of at least 1.8 percent through the third quarter of 2018, with net total openings of 134,460 over the two year period. From 2015 to 2016, non-fatal injuries and illnesses on the job were also reduced.

Employment

- Nonagricultural employment increased by nearly 2.5 percent from 2015 to 2016, at approximately the same pace as seen in the period from 2014 to 2015. The result was 71,900 new jobs created in the state from 2015 to 2016. All major metropolitan statistical areas increased in employment.

Employers

- The average number of employers increased by 2.0 percent over the year. Total payroll increased as well. Seventy-three counties had a net increase in employers over the year.

Labor Force and Demographics

- Total population increased nearly 1 percent over the year. Even as the labor force increased to 3,135,100 in 2016, the number of unemployed decreased by 26,000 to an annual average of 150,800. The unemployment rate dropped from 5.6 percent in 2015 to 4.8 percent in 2016.

Wages and Income (and Poverty)

- The Tennessee average annual wage increased nearly 1.4 percent in 2015-2016. The median wage, with half of employees earning more and half less, improved over the year by 3.1 percent, bringing the state median wage to \$32,800. Production wages increased from \$17.48/hour in 2015 to \$18.58/hour in 2016. Per capita personal income rose to \$43,380 (2016 revised), while the rate of poverty was 17.6 percent.

Job Outlook

- One measure of the job outlook is the number of unemployed individuals compared to the number of jobs posted monthly on the job seeker website jobs4tn.gov. From June 2015 to June 2016, the number of unemployed became less than the number of job postings, potentially turning the state into a job seekers' market. Job growth through 2018 was expected to be at least 1.8 percent annually.

Safety on the Job

- Safety on the job increased from 2014 to 2015 with a reduction in nonfatal injuries and illnesses.

Workforce Challenges and Strategies

- The Workforce Innovation and Opportunity Act (WIOA) is changing governance in the workforce system and integrating more services into the American Job Center network. To aid the LWDA's in this effort, fourteen categories of individuals with substantial barriers to employment, as identified in the WIOA guidelines, have been included in this report with estimates of the number within each category.
- A priority at the state and national levels in the next year will be the expansion of apprenticeships involving engaged employers/apprenticeship sponsors, classroom instruction, and paid work-based learning. Included for the first time in this report is information on the number of apprentices trained by occupation and county in Tennessee in 2016 and their sponsoring organizations. Additional information is available on request from the Labor Market Information Section.

Tennessee Economic Conditions, December 2016

During late 2016, job growth at the national level continued to remain healthy, increasing an average of 176,000 new jobs from July to December 2016. The national unemployment rate continued to decline, from a seasonally adjusted 4.9 percent in July of 2016 to 4.7 percent in December 2016. In 2016, Tennessee's seasonally adjusted unemployment rate declined from 5.0 percent in June to 4.9 percent in December, and in June 2017 was 4.2 percent, as it continues to remain lower than the national rate.

Consumer spending increased by \$334.1 billion from first quarter 2015 to first quarter 2016, although consumer confidence has been somewhat volatile with it reaching a low of 87.2 in October 2016 before rising to 98.2 in December 2016. In the last quarter of 2016, consumer spending increased by \$74.7 billion as gas prices stayed low and wages increased. In Tennessee, average weekly wages of production employees in manufacturing increased by 6.2 percent over the year from 2015 to 2016.

At the national level, despite the steady improvement in job creation, the labor force participation rate decreased slightly from a high of 62.9 percent in September 2016 to 62.7 percent in December 2016. The Tennessee rate was moving closer to the national rate, from December's 2015 rate of 59.8 percent to 60.0 percent in May 2016 and 60.4 percent in December 2016. From 2015 to 2016, Tennessee's estimated population increased by 56,138, an increase of 0.85 percent.

Tennessee's exports in the 4th quarter of 2016 decreased by almost \$130 million from the year before, ¹ at the same time as US exports actually increased slightly over the same period. The state's 1.6% decline in exports gave it a ranking of 34th among all states in export performance for the fourth quarter of 2016, a far lower ranking than the state had in recent years.

Tennessee's largest markets continue to be Canada, Mexico and China for total exports, with the Chinese markets (China, Hong Kong, and Taiwan) combining to produce an almost 15% gain in exports. This was due to a large increase in cell phone related shipment and the recent large increase of silicon exports from our state to various countries.

Sales tax revenues were up 6.2 percent and franchise and excise taxes were up 23.4 percent in December 2016 compared to December 2015, helping to fund several of the governor's initiatives in education, transportation infrastructure rebuilding, and increasing the capabilities of our state's workforce.

Statewide Employment

Tennessee's average annual nonfarm employment increased 2.5 percent from 2015 to 2016, adding 71,900 jobs. The number of goods-producing jobs grew at the same rate (2.8 percent) as the number of private service-providing jobs, while government grew the slowest (0.5 percent). In the goods-producing sector, mining, logging, and construction grew by 2,100 jobs while manufacturing increased by 10,300 jobs.

In the private service-providing industries, the major industry sectors with the largest total increases were trade, transportation, and utilities which added 14,800 jobs, and professional and business services, adding 12,600 jobs. In the former, the number of warehousing locations has been increasing, adding to more rapid job growth. In professional and business services, the fastest growing sector was management of companies and enterprises, as headquarters operations expanded in Tennessee. Another faster-growing sector has been real estate rental and leasing, growing in tandem with the construction sector.

Since 2011, Tennessee has added 304,400 jobs, an 11.4 percent increase. Professional and business services led the way gaining 82,800 jobs (primarily in administrative support, waste management and remediation, including facilities support and temporary employment services) since 2011. Only government has experienced a decline since 2011. Sectors gaining more than 25,000 jobs included durable goods manufacturing; transportation and utilities; administration, support, waste management, and remediation services; health care and social assistance; and accommodation and food services.

Figure 2

Employers

Employers

The total number of employers in Tennessee grew 2 percent to 153,178 in 2016, up from 150,243 total employers in 2015 and 145,749 total employers in 2014.

All 10 of Tennessee's Metropolitan Statistical Areas (MSAs) had a positive growth rate in the number of firms in 2016, ranging from a high of 4.4 percent (Nashville MSA) to a low of 0.6 percent (Jackson MSA). The MSAs with the highest growth rates were the Nashville (4.4 percent), Knoxville (2.4 percent), and Clarksville (2.3 percent). Williamson (6.9 percent), Cannon (6.7 percent), and Hickman (6.4 percent) counties were the highest in the Nashville MSA. The county with the lowest growth rate in the slowest growing MSA in 2016 was Madison (.1 percent).

The counties with the lowest growth rate in the number of firms were Bledsoe (-6.0 percent), Fentress (-2.5 percent), and Clay (-2.2 percent). Seventy of the ninety-five Tennessee counties had a positive growth rate in the average number of firms.

Wages

The average annual wage in Tennessee increased 1.4 percent to \$47,404 in 2016, up from \$46,746 in 2015.

The counties with the highest growth rate in average annual wages were Hardin (13.2 percent), Polk (11.6 percent), Fentress (7.3 percent), Maury (6.7 percent), and Henderson (5.9 percent).

Nine of the ten Tennessee Metropolitan Statistical Areas (MSAs) had a positive wage growth rate in 2016. (The Tri-Cities MSA had a negative wage growth rate of 0.3 percent.) The MSAs with the highest growth rates were Jackson and Knoxville (both 1.9 percent) and Memphis (1.4 percent). Crockett County had the highest wage growth rate (2.9 percent) in the Jackson MSA. Grainger County (5.2 percent) led the Knoxville MSA, and Tipton County reached 3.1 percent in the Memphis MSA.

The counties with the lowest growth rate in average annual wages were Stewart (-5.8 percent), Rhea (-3.8 percent), Scott (-3.6 percent), Morgan (-3.3 percent), and Houston (-2.3 percent). Seventy-nine of the ninety-five Tennessee counties had a positive wage growth rate.

The MSAs with the lowest wage growth rate were Kingsport (-0.3 percent), Chattanooga (0.5 percent), and Clarksville (0.6 percent).

Detailed Industry Employment

The following table (table 2) lists the twenty largest three digit industries in Tennessee. These are the industries fueling Tennessee's growth, with total employment of 1,948,390, making up 67 percent of total employment, or more than two out of every three jobs. The top 10 included seven service providing industries, general government, and two goods producing industries. The fastest growing industries from 2015 to 2016 at the state level were transportation equipment manufacturing, management of companies and enterprises, and specialty trade contractors. The highest weekly wages were found in the management of companies and enterprises (\$1,880), professional and technical services (\$1,457), and insurance carriers (\$1,435) industries.

Table 2: Tennessee's Largest Industries in 2016

Industry Code	Industry Title	Average Number of Firms			Average Annual Employment			Average Weekly Wage
		2016	2015	% Change	2016	2015	% Change

The table above summarizes the growth in employment, number of firms, and total payroll in the East, Middle, and West Regions from 2015 to 2016. All regions increased the number of firms and payroll, with the largest increases in the middle region.

Labor Force & Demographics

The annual average unemployment rate in the U.S. was 8.1 percent in 2012; 7.4 percent in 2013; 6.2 percent in 2014; 5.3 percent in 2015; and 4.9 percent in 2016. Tennessee had a lower unemployment rate than the national average in 2012 and 2016 (figure 3).

The **average annual unemployment rate** in Tennessee dropped from 5.6 percent in 2015 to 4.8 percent in 2016, a drop of -0.8 percentage points. Comparing July 2016 to July 2015 (figure 4) the unemployment rate declined from 5.6% to 4.3 percent as the state economy continued to strengthen. This decline of 1.3 percent was the second largest decline in unemployment in the country. During this time period, there was a decrease of 38, 652 people who were unemployed. This 22.5% drop was the second largest rate of decline nationally. At the same time, the labor force increased 75,546 (2.44 percent), which was the seventh highest rate of growth nationally (**Source: U.S. Department of Labor, Bureau of Labor Statistics**).

Detailed information on the labor force within Tennessee's East, Middle, and West regions can be found in the regional analysis section.

Wages & Income

Analysis of Median Wages in Tennessee 2015 - 2016

Median hourly wage growth for Tennessee from 2015 to 2016 averaged three percent. Among the 22 major occupational groups, median wages increased for 21 of the groups. The highest percentage change was for farming and forestry occupations (6.07 percent), protective service occupations (4.74 percent), and building and grounds and maintenance occupations (4.06 percent), and health care support occupations (4.05 percent). The one major group experiencing a decrease was architecture and engineering occupations (-0.55 percent).

Median annual wages for all occupations in Tennessee improved 3.09 percent from 2015 to 2016, increasing from \$31,818 to \$32,800. All areas reported increases. The top four areas displaying percentage changes greater than the state included the Cleveland MSA (9.30 percent), Chattanooga MSA (5.46 percent), Knoxville MSA (3.41 percent), and the Johnson City MSA (3.23 percent). Just below the state's growth rate were the Kingsport-Bristol-TN-VA MSA (3.09 percent), the Morristown MSA (2.54 percent), the Nashville-Davidson County MSA (2.40 percent), and the Memphis MSA (1.82 percent).

There were no areas reporting a loss in median wages over the same period. The area with the lowest increase was Clarksville MSA at 0.23 percent.

Figure 6

The following table lists ***middle skill occupations in demand*** according to the definition used by Garrett Harper in the publication “Strengthening the Middle Tennessee Region 2020.” Middle skill includes occupations with the usual entry-level education of a high school diploma and requiring more than short-term on-the-job training but less than a bachelor’s degree, and with median hourly wages greater than \$13.68.

The statewide data were developed from the 2014 to 2024 Tennessee statewide occupational employment projections, and includes those middle skill occupations with a supply-demand ratio in their program of study of less than 1.55, a positive growth rate during the projection period, and annual average openings of 25 or more. These occupations are expected to be in demand with employers in Tennessee.

For each of the statewide occupations in demand, information on the number of annual average openings expected in each LWDA was compiled from the Department’s 2014-2024 occupational projections. If less than 11 openings were expected annually in an LWDA, the cell in the occupational row is blank. For this reason and due to confidentiality concerns, the annual average total openings do not necessarily add up to statewide annual total openings.

The blue cells represent expected openings at the LWDA level for the major occupational groups. The educational levels include high school (HS), associates degrees (AA/AS), postsecondary non-degree award (PS) and some college, no degree (SC).

Eleven of the 22 occupational groups have middle skill jobs in demand. Some of the larger number of openings are in the business and financial, computer and mathematical, health practitioners and technical, construction and production, and maintenance and repair categories. As the economy continues to improve, demand is still there for tractor-trailer truck drivers in every LWDA.

Tennessee Industry and Occupational Employment Projections 2016 to 2018

From a base of 3.2 million jobs in 2016, total employment for Tennessee, including agricultural, self-employed, and private household workers, is expected to grow to nearly 3.3 million by 2018 (table 6). Expected to increase by 1.8 percent annually, Tennessee's expanding economy is showing continuing signs of steady recovery across all industry sectors.

Most of the employment growth will be in the service-providing industries with a growth rate of 1.9 percent and the addition of 93,700 jobs (figure 8). The service-providing sector is expected to outperform the goods producing by about 0.6 percent over this period, with all sectors showing positive growth. Specifically, the professional and business services and the leisure and hospitality sectors with 3.0 percent annual growth rates and expected employment additions of 25,100 and 20,300 respectively will account for much of the predicted growth. In the goods producing sector (figure 7) healthy growth within construction (2.4 percent) and the creation of 5,800 new jobs can only be considered positive indicators.

The fewest number of new jobs expected over this two year period will be in natural resources and mining (900), other services except government (1,800), and information (3,200). With seven times as many new jobs to be created by the service-providing as the goods producing sector, the long term shift from the goods producing to the service sectors is being reinforced.

Fastest Growing Industries

The fastest growing industries over this period (*table 7*) not surprisingly align with the major industry sectors experiencing growth in Tennessee.

Professional and Business Services: In this sector, management of companies and enterprises (North American Industry Classification (NAICS) 5511) represent growth in home office and corporate headquarters relocating to our state, with management, scientific, and technical consulting services (NAICS 5416) in support of that expansion, as well as computer systems design and related services (NAICS 5415).

Leisure and Hospitality: As the population of the state has increased, particularly in urban areas, drinking places (NAICS 7224), and specialty food services (NAICS 7223) have experienced above- average growth.

Manufacturing: Despite national trends showing manufacturing declining, a least five manufacturing-related industries, including dairy products (NAICS 3115), other nonmetallic mineral products (NAICS 3279), food (NAICS 3119), motor vehicle parts (NAICS 3363), and motor vehicle manufacturing (NAICS 3361) are causing total manufacturing employment to move in a positive direction.

Construction and Construction-Related Industries: Growth in the other specialty trade contractors (NAICS 2389) industry is a factor in construction serving as one of the bright spots in the goods producing sector overall. Related industries such as lumber and construction wholesalers (NAICS 4233) and activities related to real estate (NAICS 5313) are expanding as well.

Information: In this sector, computer- related industries such as software publishers (NAICS 5112) and motion picture and video industries (NAICS 5121) are also among the most rapidly growing in the state.

Occupational and Wage Growth

The fastest-growing occupational groups from 2016-2018 primarily reflect those industry sectors experiencing growth; however, computer, business and financial, and managerial occupations are found in most industries.

Computer and Mathematical occupations (table 8) with an annual growth rate of 3.3 percent is the fastest growing occupational group with 1,500 or more employment in 2016. Employment is expected to top 55,900 in the state by 2018, creating net annual openings of more than 2,400 and paying the fourth highest median wages of the 22 occupational groups. The largest of the rapidly-growing occupations is computer user support specialists (10,290 employment in 2016), followed by computer systems analysts. Other smaller but rapidly-growing occupations are software developers of systems and applications software, database administrators, and web developers.

Food Preparation and Serving occupations, the second fastest growing group at 3.1 percent, has the lowest median average wage of all groups (\$18,880). This is probably due to the high number of part-time workers and low formal skill levels required for entry into the majority of occupations. The largest occupations, growing more rapidly than the average for all occupations, are combined food preparation and serving workers (70,060), their supervisors (16,680), and restaurant cooks (23,710). This occupational group is expected to have the largest number of total openings annually.

Art, Design, Entertainment, Sports and Media occupations are projected to grow 2.7 percent annually, emphasizing the importance of creative occupations to economic development. Fast-growing occupations include producers and directors and audio and video equipment technicians.

Business and Financial Operation occupations, with the fifth highest median wage, are expected to increase 2.3 percent annually. Among the faster-growing occupations are accountants and auditors, with more than 1,000 openings per year, and management analysts, with more than 450. In support of these occupations, many of which require college degrees, are **Office and Administrative** occupations, having the second largest number of annual openings expected (17, 860). Two prominent occupations in this group are customer service representatives (3,040 total openings) and first line supervisors of office and administrative workers (1,280 annual openings).

Management occupations' employment is projected to increase by 2.2 percent annually. Not surprisingly, this occupational category has the highest annual wage (\$77,680) of the 22 occupational groups. One of the fastest growing occupations is property, real estate, and community association managers, with growth fueled by the construction industry and corporate rental of homes. Other large management occupations include general and operations managers, food service managers, and financial managers (nearly 700 openings per year).

Other Major Occupational Groups with large numbers of annual openings include **sales and related occupations** (15,485 jobs), **transportation and material moving** occupations (12,770 openings), and **production occupations** (9,565 openings, the fifth largest group). **Healthcare practitioners** have the sixth largest number of openings (6, 905) and the seventh highest per capita average wage (\$52,850). Among the higher paying occupational groups are **legal occupations** with average annual wage of \$70,500 (second highest) and **life, physical, and social science**, paying on average \$54, 870.

Table 6: Major Industry Sector Employment Growth Rates, 2016-2018

Industry Sector Code	Title	2016 Employment (Thousands)	2018 Projected Employment (Thousands)	New Jobs Created (Thousands)	Annual Average Growth Rate (%)

Critical Skills

Based on scientifically –designed employer surveys, occupational analysts working for the U.S. Department of Labor, Employment and Training Administration, assign skills and importance rankings to occupations (www.onetonline.org). Skills are ranked as more important when the employment in occupations requiring those skills is expected to grow. The ten most critical skills needed across all occupations based on estimated employment increases through 2018 include the following: Active listening, speaking, reading comprehension, social perceptiveness, and critical thinking (table 9). The next five skills considered critical include systems analysis, monitoring, writing, coordination, and judgment and decision making skills.

As listed above, some of the critical skills needed for today's jobs are important for all levels of education, including active listening, speaking, and communication skills. For those jobs requiring a four-year degree or above, reading comprehension and social perceptiveness are among the most important. In jobs requiring an associate's degree or some college, learning strategies and service orientation are vital. For jobs requiring a high school diploma or no formal education, skills such as monitoring and persuasion were ranked highly along with listening skills.

More detailed occupational projections can be found at www.projectionscentral.com (Chrome browser is optimal).

Table 9: Critical Skills for Projected Employment to 2018

All Educational Levels			
Skills	2016 Employment	2018 Employment	Employment Increase 2016-2018
Active Listening	678,346	701,689	23,343
Speaking	657,052	678,502	21,450
Reading Comprehension	314,018	325,471	11,453
Social Perceptiveness	289,478	298,006	8,528
Critical Thinking	207,449	215,677	8,228
Systems Analysis	182,119	188,074	5,955
Monitoring	171,497	177,339	5,842
Writing	164,938	170,614	5,676
Coordination	145,242	150,459	5,217
Judgment and Decision Making	107,530	111,733	4,203

Occupational Injuries and Illnesses by Industry Sector

The Labor Research and Statistics Division of the Labor Market Information division conducts the Annual Survey of Occupational Injuries and Illnesses (SOII) from a random sample of public and private sector companies in Tennessee. The data collected from this survey is used to produce the occupational injury and illness rates for industries within the State of Tennessee as well as providing demographic and case

characteristic data for work-related injuries and illnesses that result in days away from work or days of job transfer or restriction. The calculated rates represent the number of occupational injuries and illnesses per 100 full-time equivalent employees. The survey is conducted in conjunction with the Bureau of Labor Statistics, U.S. Department of Labor.

In 2015, total nonfatal occupational injuries and illnesses in Tennessee per 100 full-time equivalent workers was 3.2. Private industry rates were 3.1, and public sector rates were 4.3.

Additional information can be found at <http://www.tn.gov/workforce/article-workforce-occupational-injuries-illnesses-and-fatalities> or <http://www.bls.gov/iif/oshstate.htm#TN>.

Tennessee Census of Fatal Occupational Injuries, 2015

Tennessee Census of Fatal Occupational Injuries, 2015

There were 112 fatal work-related injuries in Tennessee during 2015, a decrease of 12 percent compared to the 127 recorded during 2014.

Key findings of the 2015 Census of Fatal Occupational Injuries:

- There were 94 fatal work injuries to wage and salary workers and 18 to self-employed persons
 - There were 105 fatal work injuries to men and 7 fatal work injuries to women.
 - There were 91 fatal work injuries in the private sector and 21 to government workers.
 - Fatal work-related injuries due to transportation incidents decreased 20 percent from 2014 to 2015 (table 10) and fatal work-related falls decreased 26 percent during the same time period.
 - Fatal occupational injuries due to contact with objects and equipment increased 31 percent from 2014 to 2015, while exposure related deaths increased 33 percent.
 - There were 87 fatal work-related injuries to White (non-Hispanic) workers, 14 to Black or African-American (non-Hispanic) workers and 10 to Hispanic or Latino workers.
 - The highest number of fatal injury occupational injuries occurred to workers in the major occupational group of transportation and material moving workers with 47 work fatalities shown in **Table 11**.
 - The range of workers between the ages of 45 to 54 suffered the most fatal work injuries in Tennessee during 2015 with 24 or 21 percent of the yearly total.
- The number of nonfatal injuries and illnesses by occupation is shown in **Table 11**.

Table 10: Fatal Work-related Injuries by Event or Exposure Tennessee, 2012 – 2015

Event or exposure	2015	2014	2013	2012
Transportation incidents	47	59	41	35
Violence and other injuries by persons or animals	15	15	15	24
Contact with objects and equipment	21	16	18	16
Falls, slips, trips	17	23	12	18
Exposure to harmful substances or environments	12	9	8	5
Fires and explosions	--	5	--	3

Workforce and Labor Force Issues in Tennessee's Regions

The state is divided into three regions to better aid workforce analysis. The East Region comprises 34 counties and includes in its border Scott, Morgan, Cumberland, Bledsoe, Sequatchie, and Marion counties. The Middle Region includes 40 counties in the central region of the state, with the western border being the Tennessee River. The West Region includes 21 counties, all those to the west of the Tennessee River. The population of the Middle and the East regions increased from 2015 to 2016, with the Middle increasing by 1.6 percent and the East by 0.7 percent. The most populous area is the Middle Region, with nearly 2.7 million residents. The East Region was slightly smaller, at 2.4 million, and the population was increasing more slowly. The population of the West Region, at 1.6 million, saw a slight decrease.

Forty-two of the 95 Tennessee counties are designated as part of metropolitan statistical areas (MSAs). There are 10 metropolitan statistical areas in Tennessee; four of these include counties bordering Tennessee in other states. Within 19 other counties, there are smaller cities; these counties are grouped into micropolitan statistical areas (MCSAs). The remaining 34 of the 95 counties are in neither MSAs nor MCSAs and could be considered rural. The highest percentage of rural counties is in West Tennessee; 52 percent of counties are rural, compared to 47 percent in Middle Tennessee and 21 percent in East Tennessee. Rural and highly urban counties are usually the most challenged in terms of educational financing and educational attainment.

Table 12: Regional Labor Force Data

	East Region	Middle Region	West Region	State Total
Population 2015	2,401,867	2,628,771	1,564,418	6,595,056

Population 2015	2,401,867	2,628,771	1,564,418	6,595,056

Sources: TN Department of Labor and Workforce Development, LMI Section, U.S. Census, 2011-2015 American Community Survey, 5-Year estimates

Note: Unemployment rates are seasonally unadjusted.

Employment and Unemployment

All regions had significant reductions in their unemployment rates over the year. In 2016, the Middle Region had the largest labor force, at 1.3 million, an average of just over 55,000 unemployed for the year, and an unemployment rate of 4.2 percent. The unemployment rate decreased from 4.9 percent in 2015. The East, although having a smaller labor force of 1.1 million, had a higher annual average unemployment rate of 5.0 percent, so the number of unemployed was just over 55,000 as well. In 2015, the unemployment rate had been higher at 5.7 percent. The West Region had the highest annual average unemployment rate, 5.7 percent, but with a smaller labor force of 0.7 million, the average number of unemployed was just over 40,000. The rate declined from 6.7 percent in 2015.

Along with the highest average unemployment rate, in 2015 the West also had the highest poverty rate of the region, at 20.7 percent (decreasing from 2014). The East had a rate of 18.0 percent (slightly increased from 2014). The Middle had the lowest rate at 15.4 percent, decreasing from 2014.

Educational Attainment

Census data on the educational attainment of the population within the East, Middle, and West Regions compared to the average for Tennessee are shown below. For the population 25 years and older, in 2015 85.5 percent of state residents were high school graduates or had higher degrees. The rates for all regions were fairly similar, with the Middle Region about a percentage point higher at 86.7, having increased over the year.

The East Region had the lowest percentage of individuals with bachelor's degrees or greater, at 22.4 percent, followed by the West at 24.6 percent and the Middle at 27.6 percent, all regions having increased over the year.

Table 13: Educational Attainment by Area, 2015

Educational Attainment	Educational Attainment for the Population Age 25 Years and Older							
	East		Middle		West		Tennessee	
	Total	Percentage	Total	Percentage	Total	Percentage	Total	Percentage

Poverty Rates by County and Region

Poverty rates vary by region, within regions, and within counties. The latest data on poverty rates are for 2015. All regions had poverty rates of 15 percent or greater, with the West Region having the highest rate at 20.7 percent; the East at 18.0 percent; and the Middle at 15.4 percent. The poverty rates for both West and Middle decreased, with that of the East increasing slightly. Poverty rates tend to be greater in the core urban counties and rural areas in Middle Tennessee as well as in the other regions.

Disability Status

For the state in 2015, 193,990 individuals were identified with a disability in a labor force of 2,962,822 (table 14). This is 6.5 percent. Those with a disability made up 13.8 percent of the unemployed. Of those not in the labor force, approximately 34 percent of individuals had a disability, demonstrating it can be a significant barrier to employment. The highest regional percentage of those not in the labor force and having a disability was in East Tennessee with 38.7 percent.

Table 14: Disability Status of Those in the Labor Force

Area	Civilian Non-institutional Pop. (18-64)	In the Labor Force						
		Total	Employed			Unemployed		
			Total	With Disability	No Disability	Total	With Disability	No Disability
East	1,447,802	1,046,415	960,102	62,643	897,459	86,313	13,740	72,573
Middle	1,583,048	1,206,439	1,118,879	61,664	1,057,215	87,560	11,369	76,191
West	954,256	709,968	637,031	35,609	601,422	72,937	8,965	63,972
Tennessee	3,985,106	2,962,822	2,716,012	159,916	2,556,096	246,810	34,074	212,736

Table 15: Disability Status of Those Not in the Labor Force

Area	Civilian Non-institutional Pop. (18-64)	Not in the Labor Force				
		Total	With Disability	No Disability	Percent w/ Disability	Percent w/o Disability
East	1,447,802	401,387	151,528	249,859	37.8%	62.2%
Middle	1,583,048	376,609	116,886	259,723	31.0%	69.0%
West	954,256	244,288	81,858	162,430	33.5%	66.5%
Tennessee	3,985,106	1,022,284	350,272	672,012	34.3%	65.7%

Source: U.S. Census Bureau, 2011-2015 American Community Survey 5-Year Estimates

Youth Unemployment

High youth unemployment (ages 16 to 24) continues to be challenge across the regions. The latest data is available for 2015 (table 16). With an average state unemployment rate in 2015 of 5.6 percent, youth unemployment was from three to four times greater, with the highest rates in West, East, and Middle Tennessee, respectively. In West Tennessee, nearly one in four youth in the Region in the labor force was unemployed.

Table 16: Youth Unemployment, Ages 16 – 24

Area	Labor Force	Unemployment	Rate
East Region	167,519	27,567	16.46%
Middle Region	187,489	29,744	15.86%
West Region	112,347	25,136	22.37%

Source: American Community Survey, 2015, 5-year estimates

Unemployment Claims by Occupation

Twelve months of unemployment claims for 2016 were examined by occupation for each of the three regions. The three major occupational areas with the most claims were production, office and administrative support, and transportation and material moving occupations, followed by sales and construction occupations.

All 2016 Unemployment Claims by Major Occupational Group

Source: TN Department of Labor & Workforce Development, LMI Section

Figure 9

The two regions with the most production unemployment claims were the Middle and West regions. These regions include several manufacturing industries among the top 10 expecting to create the most new jobs; at the same time, several manufacturing industries have reduced jobs in the state. It is not surprising that sales jobs had many claimants; it is one of the largest occupational areas in the state and has many part-time and lower-paid occupations, including some which do not require a high school degree.

Claims for office and administrative support occupations were higher in the Middle and West; in those regions, administrative and support services was the top industry expected to add the most new jobs. Construction claims were higher in the Middle and East regions. The West Region also had a high number of claims in transportation occupations; as a transportation hub for the state, it also is leading in warehousing and storage as a top industry.

Detailed Regional Analysis

East Region

Source: TN Department of Labor & Workforce Development, Current Employment Statistics

Figure 10

The East Region contains six MSAs and six Micropolitan statistical areas. From 2015 to 2016, just one of the MSAs, Chattanooga, grew faster than the state, with the East Region as a whole slightly slower than the state in annual average growth (1.9 vs. 2.5 percent – figure 10). Chattanooga added 1,000 jobs in the goods-producing industries, including 900 in manufacturing. The leisure and hospitality sector added 1,400, and trade, transportation and utilities nearly 2,000, two and a half times as fast as the previous year's growth rate in this sector. The education and health care sector lost 700 jobs. Knoxville added 2,500 manufacturing, 1,400 trade, transportation, and utility, and 1,200 education and health services jobs. Cleveland added 400 manufacturing and 1,200 professional and business services jobs. The Kingsport-Bristol area experienced the slowest growth.

Where to find it: The number of jobs created by Industry in an MSA can be located at jobs4tn.gov>LMI Home>Data Trends>Employment and Wage Data>Industry Data>Current Employment Statistics

Table 17: East - Top Ten Industries Expected to Create the Most New Jobs to 2024

NAICS Industry Code	Industry Title	East Region Industry Ranking	Estimate	Projection	East Region New Jobs
621000	Ambulatory Health Care Services	1	51,240	72,640	21,410
561000	Administrative and Support Services	2	62,620	79,240	16,610
722000	Food Services and Drinking Places	3	87,690	99,600	11,910

Source: TN Department of Labor and Workforce Development, LMI Section, TN Employment Projections, 2014-2024

How to Find It: Locate the names of companies in these industries in your county or zip code at www.jobs4th.gov. On the home page, click on “Find Employers Near You.”

The table above (table 17) lists the top ten industries expected to create the most new jobs in the East Region between now and 2024, ranked by number of jobs to be created. One of the goods producing industries, transportation equipment manufacturing, ranks sixth of the top ten. Other top job-creating industries will be in health services (ambulatory care, hospitals, and nursing and residential facilities), education, and professional, scientific, and technical services.

The table below compares unemployment rates for 2015 and 2016 for the MSAs and MCSAs with the state and national rates. For all areas (except for Dayton) their average unemployment rates were lower in 2016 than in 2015. In 2016, two of the faster-growing MSAs, Knoxville and Cleveland, had rates lower than the state average of 4.8 percent. Within the MSAs, particularly in Knoxville, the unemployment rates varied considerably from county to county- from 7.0 percent in Campbell County to 4.1 percent in Knox.

2016 Tennessee Annual Average Percent Unemployment by County

Low	4.1%	5.4%	6.1%	6.7%	7.4%	9.1%
High	5.4%	6.1%	6.7%	7.4%	9.0%	10.0%

The per capita income for counties is displayed in Table 23. With the state per capita income at \$42,069 in 2015, 27 of 34 counties in the East Region, or 79.4 percent, had per capita incomes more than 10 percent below (\$37,862.10) the state average. This is highest percentage of counties in the three regions.

Middle Region

Source: TN Department of Labor and Workforce Development, LMI Section, Current Employment Statistics

Figure 12

Employment in the Middle Region grew faster than the state during 2015- 2016, with the Nashville MSA advancing at a healthy pace. Nashville was the fastest growing MSA in the state with 3.8 percent. In addition to the two MSAs, the Middle Region contains five Micropolitan areas (see table 20).

The Nashville-Davidson-Rutherford MSA added 37,500 jobs, one of every two jobs created in the state. The largest job additions are listed below:

- Professional and business services, 9,100 jobs
- Leisure and hospitality 5,700 jobs
- Education and health services, 5,000 jobs
- Trade, transportation, and utilities, 4,600 jobs
- Finance, 3,100 jobs
- Manufacturing, 2,700 jobs
- Information, 2,200 jobs (seven times its growth rate in the previous year)

In 2016, the Clarksville metro area added 500 jobs; of these, 300 were in manufacturing.

Table 19 displays the ten industries expected to create the most new jobs through 2024. The strength of the Middle Region is its diversity of expanding industries across both the goods producing and services providing sectors. Among the top industries are expected to be professional and business services (administrative and support services, professional and technical services, and management of companies), health care, educational services, and leisure and hospitality. Both transportation equipment manufacturing and construction specialty trade contractors in the goods producing sector are expected to add thousands of new jobs

Table 19: Middle Region: Top Ten Industries Expected to Create the Most New Jobs

NAICS Industry Code	Industry Title	Middle Region Industry Ranking	Estimate	Projection	Middle Region New Jobs

Table 20 compares unemployment rates for MSAs and MCSAs in the Middle Region for 2015 and 2016. As in the East Region, all areas experienced a decrease in unemployment rates from 2015 to 2016 as the economy improved. The Nashville Metro area unemployment rate (3.8 percent) was significantly below the state's rate, with all but one of the counties below the state's rate as well. The unemployment rates across the counties were less divergent than found in the Knoxville MSA. The Clarksville Metro area, however, still had a rate above that of the state. One Micropolitan area, Lewisburg, had a rate below the state rate as well.

The per capita income for counties is displayed in Table 23. With the state per capita income at \$42,069 in 2015, 31 of the 40 Middle Region Counties (77.5 percent) had incomes greater than 10 percent below the state average per capita income.

West Region

Source: TN Department of Labor and Workforce Development, LMI Section, Current Employment Statistics

Figure 13

Employment in one MSAs in the West Region of the state, Memphis, grew at a pace about one percent slower than the statewide average, whereas Jackson grew slightly faster. In Jackson, over the year, 1,900 jobs were added; 500 jobs were added in manufacturing and 400 in government. Education and health services added no additional jobs. In the Memphis TN-MS-AR MSA, 12,500 jobs were added; 900 jobs in manufacturing; in the services-providing sector, 5,700 in transportation, warehousing, and utilities; 2,700 in education and health services; and 2,200 in leisure and hospitality. In addition to the two MSAs, the West Region contains four Micropolitan regions (see table 22), with a combined labor force of 60,950 workers.

Table 21 lists the top ten industries expected to create the most new jobs in the West Region. Like the other regions, business and professional services (administrative and support, professional and scientific, and management of companies) industries are expected to be prominent among job creation, as are health care and educational services. Unique to the West Region are the trade, transportation, and utility industries in the top ten, including wholesale durable goods and warehousing and storage.

Table 21: West Region Top Ten Industries Expected to Create the Most New Jobs

All MSAs and MCSAs in the West Region reduced their average unemployment rates from 2015 to 2016. Only the Arkansas portion of the Memphis MSA, however, had an unemployment rate lower than the state rate in 2016. The Union City MCSA had the highest unemployment rate in the region.

Workforce Challenges and Strategies

The Workforce Innovation and Opportunity Act (WIOA) was to be fully implemented by July 1, 2017. By the end of 2016, implementation was well underway. A major effort has been the integration of workforce services with shared collaborative goals among partners. This included the rebranding of workforce services into the American Job Centers, the integration of vocational rehabilitation services into the centers, the launching of GUS to provide integrated unemployment insurance and workforce services, and other innovations such as real-time workforce services tracking through one touch and Zendesk.

Challenges: Substantial Barriers to Employment

WIOA included a renewed focus on those with substantial barriers to employment (SBEs), with categories specifically defined in the WIOA guidelines. Estimates of the number of these individuals by Local Workforce Development Areas (LWDAs) in Tennessee were produced from a number of sources, including the following:

- U.S. Census Bureau
- U.S. Department of Labor, Bureau of Labor Statistics (BLS)
- Tennessee Department of Correction
- Tennessee Department of Human Services
- Tennessee Department of Children's Services

Several of these departments have different service areas than the LWDAs, so population-based estimates were created by the Department of Labor and Workforce Development, LMI Section. These estimates are displayed in Table 24. Individuals with barriers to employment by LWDA in the following categories are included:

- Number in poverty
- Number of low income individuals
- Native Americans
- Individuals with disabilities
- Older individuals
- Those in households where English is not spoken well, or not at all
- Justice-involved individuals (on probation, parole, and delinquent youth in care)
- Those in foster care and those aged out
- Single parents
- Temporary Assistance for Needy Families (TANF) case closures in FY 2016
- Numbers of homeless persons

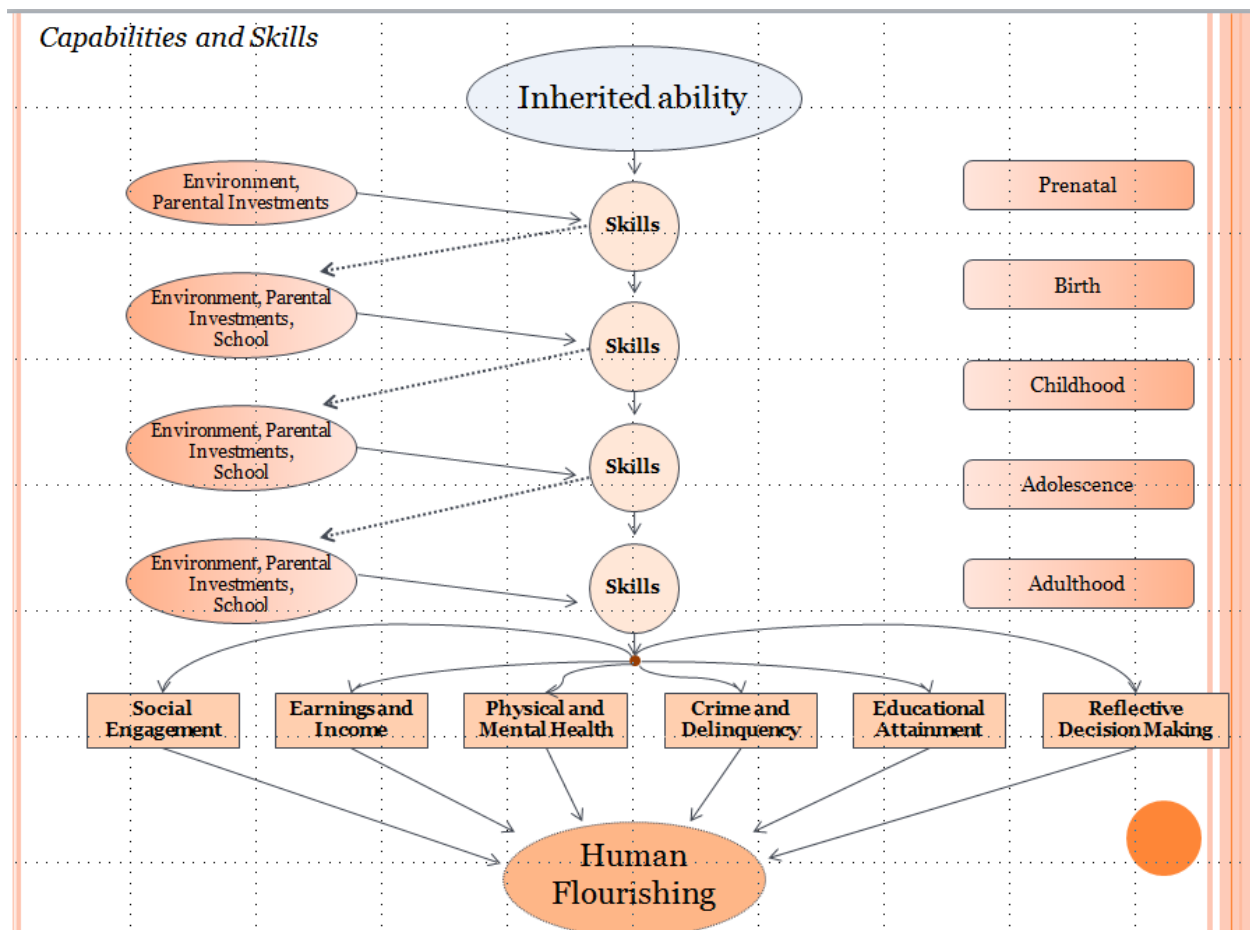

Some measures are more reliable than others. Homeless censuses are done infrequently, and may not capture many who are not living on the streets but nonetheless do not have permanent housing. The largest groups include low-income, older individuals, and those with disabilities. As integrated databases are developed, determining individuals who have two or more barriers would assist in prioritizing services.

Moving Beyond the Barriers

Heckman and Corbin (2016)² identify six areas of skill development which are essential for human flourishing – for an individual to be able to achieve well-being and operate successfully in society (figure 15). Skills are achieved through use of resources in the environment (those available to the individual in the state, city, and community into which they are born), the resources their parents are able to provide, and the education they receive. Skill development continues from the prenatal stage through adulthood.

Individuals with substantial barriers to employment are those who have not yet achieved adequate skill levels in one or more of the skill categories and therefore lack the capabilities to flourish in their communities. For example, those in poverty lack sufficient earnings and income; they may also have less than adequate physical or mental health, lower educational attainment, or lack access to social networks which could connect them to improved employment.

Individuals with disabilities may lack adequate physical and/or mental health to be able to earn sufficient income to be self-sustaining. Youth in foster care may lack opportunities to earn needed income or lack transportation to obtain additional education. Justice-involved individuals will face many barriers/skills needed for self-sufficiency; if they are parents, these deficiencies may affect their children's opportunities. Assessment of challenges in each of the six categories is necessary to create employment and education plans to reduce the number of individuals with barriers to employment.

Strategy: Apprenticeships

An increasing focus in workforce services to develop high skilled, high paying jobs including on-the-job training is on apprenticeships. Funds to recruit employers to develop registered apprenticeships are available in 2017 to the LWDAs, with apprenticeship coordinators assigned in each. In addition, an apprenticeship accelerator planning grant is available to promote apprenticeships among stakeholders in Tennessee.

To inform this effort, data has been obtained from the Office of Apprenticeship in the U.S. Department of Labor on the number of apprenticeship completions in 2016 and the sponsoring organizations. Table 25 lists the 64 sponsoring organizations with registered programs and completers in Tennessee: 34 in the East, 16 in the Middle, and 14 in the West Region. A total of 656 apprentices completed programs: 381 in the East, 133 in the Middle, and 142 in the West Region.

Source: U.S. Department of Labor Office of Apprenticeship and Training

Table 26 lists the occupations for which the apprentices trained. In the East, the largest occupations were chemical operators, electricians, electromechanical technicians, and pipe fitters (construction). In the Middle, electricians, sheet metal workers, and structural steel/ironworkers, reflecting the significant growth in construction in the area, were the largest. In the West, electricians, line installer-repairers, and pipe fitters (construction) were the largest occupations for which apprentices trained and completed programs. Although construction and manufacturing-related training was predominant, there were cooks, greens keepers, a landscape gardener, and wastewater-treatment-plant-operator completers as well. There seems sufficient demand to diversify the number of occupations included in apprenticeships and to broaden the number of sponsors who need skilled employees and who would be willing to initiate apprenticeship programs.

Table 26: Apprentice Completers 2016 by Job Title and Region

OCCUPATIONAL JOB TITLES OF TRAINING COMPLETERS	EAST TENNESSEE	MIDDLE TENNESSEE	WEST TENNESSEE
Cable Installer-Repairer			8
Carpenter	14		
Carpenter, Interior Systems	4		
Carpenter, Maintenance	1		2
Chemical Laboratory Tech	1		
Chemical Operator III	60		
Construction Craft Laborer	2		
Control Equip Elec-Tech			3
Cook (Hotel & Restaurant)		11	
Cook, Pastry (Hotel & Restaurant)		4

Conclusion

The Tennessee economy strengthened in 2016. Employment increased nearly 2.5 percent, creating 71,900 new jobs. The unemployment rate continued its decline. All metropolitan areas increased in employment. The average number of employers increased by two percent. The ratio of unemployed to job openings in June 2015 remained below 1.0; that is, there was less than one unemployed person with a resume per job opening listed on jobs4tn.gov in the state, indicating a potential shortage of applicants for available jobs.

This reinforces the need to retain current workers in the labor market and to increase the labor force participation rate and skills of Tennessee's population. Under WIOA, veterans, youth, those with disabilities, adults living below the poverty rate, and those living in regions with high unemployment will have more opportunities to upgrade their skills, receive targeted employment services, and strengthen their labor market performance.

Tennessee's East, Middle, and West Regions have some significant differences, with the Middle Region leading in population and job growth, as well as in educational attainment for the population 25 years of age and older. However, this area still has significant areas of poverty in the core cities and rural counties. The West Region had the highest annual average unemployment and poverty rates, as well as the highest youth unemployment rate, but has educational attainment above the state average. The Memphis MSA is growing more slowly than the state but the Jackson metropolitan area has surpassed the state's job growth rate.

Projections are that employment will continue to increase in each region. The industries expected to create the most new jobs are identified, and include some in the manufacturing sector, especially in auto-related industries, as well as education, health care, and business and financial services. The top ten industries do differ by region as shown in the tables in each section.

The Workforce Innovation and Opportunity Act (WIOA) is changing governance in the workforce system and integrating more services into the American Job Center network. To aid the LWDA's in this effort, fourteen categories of individuals with substantial barriers to employment, as identified in the WIOA guidelines, have been included in this report with estimates of the number within each category. As service databases are slowly integrated, a future possibility should be the identification of overlap within these categories so more resources can be focused on individuals with two or more barriers.

New research in human development has identified six areas of skill development essential to well-being: social engagement, earnings and income, physical and mental health, avoidance of crime and delinquency, educational attainment, and reflective decision making. In workforce development, ideally, all areas would be assessed as individual employment plans are developed and action steps implemented.

A priority at the state and national levels in the next year will be the expansion of apprenticeships involving engaged employers/apprenticeship sponsors, classroom instruction, and paid work-based learning. Included for the first time in this report is information on the number of apprentices trained by occupation and region in Tennessee in 2016 and their sponsoring organizations. Additional information is available on request from the Labor Market Information Section.

Key supply-side strategies to improve Tennessee's labor force participation rate and job skills continue in the state: the Governor's Drive to 55 initiatives, increasing the number of Tennesseans with postsecondary credentials to 55 percent by 2025. The strategy includes the Tennessee Promise to increase youth postsecondary success, Tennessee Reconnect to increase adult postsecondary completions, improvements

in the adult education system, and the two-generation focus in the Department of Human Services to reduce intergenerational poverty.

It is hoped that the extensive industry information included in this report will aide workforce professionals and educators from the high school level through higher education to better understand employer needs within the East, Middle, and West regions and to develop demand-driven strategies and improved career pathways. This is an essential building block to strengthen Tennessee's economy and opportunity for all Tennesseans.
